## CASOA™ Subgroup Comparisons

NRC is a charter member of the AAPOR Transparency Initiative, providing clear disclosure of our sound and ethical survey research practices.

## Survey Background

### About the Community Assessment Survey for Older Adults™

The Colorado State Unit on Aging contracted with National Research Center, Inc. (NRC) to conduct an assessment of the strengths and needs of its older residents. The Community Assessment Survey for Older Adults (CASOA™) is a statistically valid survey of older adults used by staff, elected officials and other stakeholders to plan for older adult services, programs and facilities. The ultimate goal of the assessment is to create an empowered community that supports a vibrant older adult population in the community.

The survey and its administration are standardized to assure high quality survey methods and comparable results across CASOA™ communities. Participating older adult households were selected at random and the household member who responded was selected without bias. Multiple mailings gave each household more than one prompt to participate with a self-addressed and postage paid envelope. Results were statistically weighted to reflect the proper demographic composition of older adults in the entire community.

Communities conducting CASOA™ can choose from a number of optional services to customize the reporting of survey results. State of Colorado's Report Subgroup Comparisons is part of a larger project for the agency and additional reports are available under separate cover.

One of the add-on options that State of Colorado chose was to have crosstabulations of survey questions by age, household composition, ethnicity, income, and gender and Area Agency on Aging (AAA). This report contains the results of these analyses.

### “Don't Know” Responses

On many of the questions in the survey respondents may answer “don't know.” The proportion of respondents giving this reply is shown in the full set of responses included in Appendix B of the full report. However, these responses have been removed from the analyses presented in the body of the report. In other words, the tables display the responses from respondents who had an opinion about a specific item.

### Understanding the Tables

In this report, comparisons between demographic and AAA subgroups are shown. For most of the questions, we have shown only one number for each question. We have summarized responses to show only the proportion of respondents giving a certain answer; for example, the percent of respondents who rated the quality of life as “excellent” or “good,” or the percent of respondents who participated in an activity at least once.

The subgroup comparison tables contain the crosstabulations of survey questions by selected respondent characteristics. Chi-square or ANOVA tests of significance were applied to these breakdowns of survey questions. A “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed between groups are due to chance; or in other words, a greater than 95% probability that the differences observed in the selected categories of the sample represent “real” differences among those populations. Statistical testing was not performed on multiple response questions.

For each pair of subgroups that has a statistically significant difference, an upper case letter denoting significance is shown in the category with the larger column proportion. The letter denotes the category with the smaller column proportion from which it is statistically different. Differences were marked as statistically significant if the probability that the differences were due to chance alone were less than 5%. Categories were not used in comparisons when a column proportion was equal to zero or one.

Items that have no upper case letter denotation in their column and that are also not referred to in any other column were not statistically different.

It should be noted that when a table for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.

### Precision of Estimates

---

It is customary to describe the precision of estimates made from surveys by a “level of confidence” and accompanying “confidence interval” (or margin of error). A traditional level of confidence, and the one used here, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents’ opinions are relied on to estimate all residents’ opinions.<sup>1</sup>

The margin of error for the State of Colorado survey report is no greater than plus or minus 1% around any given percent and one point around any given average rating reported for all respondents (6,247 completed surveys).

Where estimates are given for subgroups, they are less precise. Generally the 95% confidence interval is plus or minus 10 percentage points for samples of 100, and for smaller sample sizes (i.e., 50), the margin of error rises to plus or minus 14%. The significance testing for the following comparisons is more precise than the general rule of thumb.

---

<sup>1</sup> A 95% confidence interval indicates that for every 100 random samples of this many residents, 95 of the confidence intervals created will include the “true” population response. This theory is applied in practice to mean that the “true” perspective of the target population lies within the confidence interval created for a single survey. For example, if 75% of residents rate a service as “excellent” or “good,” then the 4% margin of error (for the 95% confidence interval) indicates that the range of likely responses for the entire community is between 71% and 79%. This source of uncertainty is called sampling error. In addition to sampling error, other sources of error may affect any survey, including the non-response of residents with opinions different from survey responders. Though standardized on CASOA, on other surveys, differences in question wording, order, translation and data entry, as examples, can lead to somewhat varying results.

## Comparisons by Age

Table 1: Question 1

Percent of respondents who rated the following as "excellent" or "good":	Age			Colorado overall
	60 to 64 years	65 to 74 years	75 or over	(A)
	(A)	(B)	(C)	
How do you rate your community as a place to live?	81%	85% A	87% A	84%
How do you rate your community as a place to retire?	58%	66% A	77% A B	66%

Table 2: Question 2

Percent of respondents who rated the following as "excellent" or "good":	Age			Colorado overall
	60 to 64 years	65 to 74 years	75 or over	(A)
	(A)	(B)	(C)	
Opportunities to volunteer	76%	79% A	80% A	78%
Employment opportunities	29%	34% A	35% A	33%
Opportunities to enroll in skill-building or personal enrichment classes	47%	55% A	57% A	53%
Recreation opportunities (including games, arts and library services, etc.)	72%	77% A	74% A	75%
Fitness opportunities (including exercise classes and paths or trails, etc.)	75%	80% A	80% A	78%
Opportunities to attend social events or activities	62%	66% A	69% A	65%
Opportunities to attend religious or spiritual activities	76%	83% A	84% A	81%
Opportunities to attend or participate in meetings about local government or community matters	68% B C	64%	62%	65%
Availability of affordable quality housing	11%	12%	25% A B	15%
Variety of housing options	20%	22%	30% A B	23%
Availability of long-term care options	24%	29% A	46% A B	32%
Availability of daytime care options for older adults	20%	22%	40% A B	27%
Availability of information about resources for older adults	37%	38%	50% A B	41%
Availability of financial and legal planning services	34%	36%	49% A B	39%
Availability of affordable quality physical health care	29%	42% A	54% A B	41%
Availability of affordable quality mental health care	19%	27% A	38% A B	28%
Availability of preventive health services (e.g., health screenings, flu shots, educational workshops)	49%	54% A	66% A B	56%

CASOA™ Subgroup Comparisons

Percent of respondents who rated the following as "excellent" or "good":	Age			Colorado overall
	60 to 64 years	65 to 74 years	75 or over	(A)
	(A)	(B)	(C)	
Availability of affordable quality food	47%	54% A	66% A B	55%
Sense of community	47%	55% A	57% A	53%
Openness and acceptance of the community towards older residents of diverse backgrounds	54%	52%	59% A B	54%
Ease of travel by public transportation (bus, rail, subway) in your community	24%	28%	34% A B	28%
Ease of walking in your community	59%	61%	68% A B	62%
Ease of getting to the places you usually have to visit	62%	65%	71% A B	66%
Overall feeling of safety in your community	66%	70% A	73% A	69%
Valuing older residents in your community	50%	51%	58% A B	52%
